

Student ID: 232-15-184 Program: BSc in CSE Semester: Spring/Summer/Fall/Year 2026
Course Code: CSE326 Course Title: Social & Professional Issues in Computing Section: GB-M Date: 17-06-26
Class Test No. 01 Signature of the Course Teacher: _____

Ans. to the question no-01(a)

Computer technology help to do automated in many sections in many ways. Some of them are describe down below:

- ① **Automation in Robotics:** Sometimes Robots use many hospitals and hotels those can work on give services by own. It's replaced by human.
- ② **Automation in Agriculture:** There are many soil and fertilize predictions which can automatically sense the soil and give reports about soil and fertilization which is replaced by human.
- ③ **Automation in Industry:** There are some few robots or machine which are used for arranging or sorting big products which can't be easier for human also replaced by large number of labour.
- ④ **Automated Attendance Tracker:** In school, college or bank there have attendance trackers which can take attendance of people just scanning. It's replaces manual attendance tracking.
- ⑤ **Weather Prediction:** By using radar which is connected with some software; it can give the accurate predictions of weather like rain chances, humidity etc. which replaces human predictions.
- ⑥ **Chatbots:** We use chatbots in website or for our personal use which

gives answer automatically based on our question.

⑦ Self driving car/vehicles: It's a usable automated system which can drive on road using sensors by analyzing the situation of roads.

⑧ Automation in Medical: We use automated CT scan, ECG for medical images which replaces manual X-Ray and gives more accurate results.

⑨ Automation in Sports: DRS method in Cricket, VAR in football helps to take accurate decision which replaces incorrect call of umpire.

⑩ Automation in Military: Government added some advance automated equipments on ships which can detect and destroy opponent base easily. There are more which help us in our everyday life.

Ans. to the question no-02(a)

Medical data are sensitive data so there should be some principles followed when collecting and managing data. Such as:

① Informed Information Gathering: When data is collecting the patient must have consent. And Authority should give patient a clear knowledge that where and how they will use these data.

② Secondary Data: If data is collecting for a reason and use it for another reason it violates the rule. So it must be followed that clear that the data is using properly in a right place.

Course Code: CSE326 Course Title: Social Professional Issues in Computing Section: 65-M Date: 17-06-26
Class Test No.: 01 Signature of the Course Teacher:

③ FIP: There are more in this case.

① collection: Collecting data after taking permission.

② Accuracy: Data ~~raw~~ accuracy must be maintained.

③ Accountability: Data accountability must be followed.

④ Explanation: Give reason that where it will use.

⑤ Opt In: Here default is No consent. Data given must have to give a consent of each option.

⑥ Opt Out: Here default is Yes of all consent so it is hard for data given so it must be organize.

⑦ Data Retention: Data should be deleted after work done.

⑧ Privacy: Data should be private and sensitive data should get more protection.

⑨ Security: Data should more secured so that no one can access it.

Ans: to the question no-3(a)

There is not a single age that web monitoring become an invasion of child's privacy ~~but~~ it actually depends on ^{excess}

culture, maturity etc. But if it is universal than after 18 web monitoring become an invasion of the child's privacy. Some for the tracking devices. It also depends on child maturity. But because of clear knowledge I divided category in some ages.

① Age 0 to 7: This is actually prime child age. This time child ~~can't~~ don't understand many thing which would be good or bad for them so, that time parent can track their device and services without their consent.

② Age 8 to 12: It's the primary part of adolescence. So children are growing fast. So that time parents should also track their services but they have to explain their child in a good way otherwise they think it is against their freedom.

③ Age 13 to 15: This is a risk time so, here parent should transparent and needve. track. But they must monitor

④ Age 16 to 17: This is before adult time here tracking should minimal

Student ID: 232-15-184 Program: _____ Semester: Spring/Summer/Fall/Year: _____

Class Test No. _____ Signature of the Course Teacher: _____

⑧ Age 18: Here it is adult time so track should be of. Because not it become an invasion of child privacy.

Overall everything is based on culture and maturity. And parent should be careful so that child should think that their parent is their friends.
